## **Introduction to the 2023 Age, Sex, Race, and Hispanic Origin Estimates and Projections**

The following pages contain Age, Sex, Race, and Hispanic Origin Estimates and Projections for the State of Nevada and its counties as part of the 2023 edition of the 20-year population projections published each October by the Nevada State Demographer. These estimates and projections are prepared annually in accordance with NRS 360.289 pertaining to the annual reports of projected population of counties.

Data sources used in these estimates and projections include: the 2000 and 2010 Census data by age, sex, race, and Hispanic origin<sup>†</sup>; the 2000, 2010, and 2020 Census data for group quarters population; Nevada birth information for 2000 to 2022 from the Nevada Department of Health and Human Services; U.S. Decennial Life Tables for 1999–2001: State Life Tables National Vital Statistics Report, Volume 60, Number 9, September 14, 2012, National Center for Health Statistics; the State Demographer’s intercensal estimates for 2000 to 2010; and the Nevada Governor’s Certified Series population estimates for 2011 to 2022.

Please note, these estimates and projections may not add up to the total for the state and the county due to rounding differences. These differences are minor and have no significant impact on the overall distribution of the population.

There are two sets of tables for the counties of Carson City, Clark, Elko, Humboldt, Lincoln, Nye, Pershing, Washoe and White Pine as well as for Nevada. These counties have institutional group quarters populations (adult correctional facilities) that impact their age, sex, race, and Hispanic origin distribution. Because of this, the first table includes the group quarters population and household population whereas the second table is without group quarters and only includes the household population.

The U.S. Census Bureau collects race and ethnicity data in accordance with guidelines provided by the U.S. Office of Management and Budget (OMB), and these data are based on self-identification. The Census includes the categories of “some other race” as well as “two or more races in combination”. For these estimates and projections, the data is provided for five categories: White; Black; American Indian, Eskimo, or Aleut; Asian or Pacific Islander (all not of Hispanic Origin) and Hispanic Origin of Any Race. The “some other race” and “two or more races in combination” groups were reallocated to the five categories by age and sex. Birth data provided by the Nevada Department of Health and Human Services included race designations for “other” and “unknown”. Those births were proportionally allocated to the five categories by county for completeness. Nevada birth rates for 2011 through 2022 were used to “age forward” the population, accounting for survival rates in the NCHS Life Tables, to determine an estimate of natural population change. When the number of births was fewer than 20 for a single cohort, the statewide birth rate was substituted to avoid random error resulting from small populations. The residual derived from aging the population represents one estimate of migration. The distribution of the residual population was linearly interpolated by year (without Group Quarters), providing an estimate of annual migration by cohort. The natural change summed with the estimated migration, controlled for negative growth, provides the breakdown of population by cohort.

<sup>†</sup> The US Census Bureau released detailed population characteristics for the 2020 Decennial Census (DHC-A) on 9/21/23. However, the fitness for use has not yet been evaluated as of this publication.
