

NEVADA TAX COMMISSION
May 2, 2022

TOPIC: Approval of the 2023-2024 Statewide Improvement Factor.

AUTHORITY: NRS 361.260(5) requires the county assessor to determine the assessed value of property not reappraised either by (a) Determining the replacement cost, subtracting all applicable depreciation and obsolescence, applying the assessment ratio for improvements, if any, and applying a factor for land to the assessed value for the preceding year; or (b) Applying to the assessed value for the preceding year a factor for improvements, if any, as adopted by the Nevada Tax Commission in the manner provided by NRS 361.261.

EXPLANATION: The Department proposes application of a statewide improvement factor of 1.10. The Department calculates the improvement factor based on the change in costs reported by the Marshall and Swift Costing Service from the previous year. NRS 361.261 requires the Department to propose any improvement factors on or before February 1st of each year. Then, on or before May 15th of the same year, each county assessor shall notify the Tax Commission that he/she either approves or objects to the proposed factors that are applicable to the county he represents. If any county assessor objects, the Tax Commission shall hold a hearing on the proposed factors and make every effort to reconcile the objections. All of the counties have approved the 2023-2024 improvement factor.

RECOMMENDATIONS: The Department recommends adoption of the 2023-2024 statewide Improvement Factor of 1.10, detailed at page 1 of the Report. The Department also recommends that all counties should implement annual reappraisal of improvements. At present, fourteen counties conduct an annual reappraisal of improvements and all seventeen counties reappraise land on a yearly basis. Annual reappraisal of improvements is the preferred method of valuation.

The table below summarizes changes made from last year’s approved publication to this year’s requested publication:

REPORT

2023-2024 IMPROVEMENT FACTOR

NRS 361.260(5) provides that assessors may either apply a factor to improvements in non-reappraisal areas or they have the option of determining the replacement cost and subtracting all applicable depreciation and obsolescence for improvements. The Department calculates the improvement factor based on the change in costs reported by the Marshall and Swift Costing Service from the previous year.

NRS 361.261 requires the Department to propose any improvement factors on or before February 1st of each year. Then, on or before May 15th of the same year, each county assessor shall notify the Tax Commission that he/she either approves or objects to the proposed factors that are applicable to the county he/she represents. If any county assessor objects, the Tax Commission shall hold a hearing on the proposed factors and make every effort to reconcile the objections. All of the county assessors have indicated their approval of the improvement factor for **2023-24**.

Legislative history and the minutes of Tax Commission meetings since 1981 indicate the purpose of the factor is to keep properties not reappraised at a similar level of assessment with properties that are reappraised. Typically, reappraised properties reflect the inflationary trends affecting new construction. However, the county assessors are only required to reappraise once every five years. If an improvement factor is not applied to non-reappraised properties during the interim between reappraisals, over time there is the potential of a large upward spike in assessed value in order to catch up with the inflationary trends of the previous four years. The improvement factor provides a means to ensure a stable property tax environment and avoids unanticipated valuation increases.

The Department annually conducts a study of the Marshall & Swift cost manual, by region, to determine the increases or decreases in typical building costs.

For the **2023-24** tax cycle, the Department recommends that a statewide factor of **1.10** be applied to non-reappraised improvements. This is a statewide average supported by the source listed above. The factor represents building cost trends but does not include all applicable depreciation and obsolescence, which must be calculated at the local level. The factor is contained within the range of reasonable representations of cost changes. A statewide factor displays less volatility than regional factors while still maintaining values between the mandated range of 32% to 36% required by NRS 361.333 and improving uniformity among jurisdictions.

STUDY OF MARSHALL-SWIFT COSTING SERVICE COST MANUAL

Tracking changes in costs reported by the Marshall and Swift Costing Service is important because, pursuant to NAC 361.128 (2)(b), county assessors are required to use:

The standards in the cost manuals, including modifiers of local costs, published through or furnished by the Marshall and Swift Publication Company, as they existed on January 1 of the year preceding the current assessment year, if the executive director approves it for use by county assessors in determining the costs of improvements.

The study of the Marshall-Swift Costing Service is conducted annually by the Department. The steps include an analysis of the rate of change of regional factors for each class of construction, including five types of commercial construction and two types of residential construction. The local cost modifiers are also studied to determine the rate of change, from January 1st of 2021 to January 1st of 2022, for each building type and applied to the regional change.

The resulting forty-nine factors are mathematically accurate, but unwieldy for assessors to apply, because it would require an individual analysis and data entry on each property to see which of the forty-nine factors is the most appropriate. To simplify the process, the Department weights the factors on the basis of the type of construction observed statewide. This reduces the number of factors to five for commercial and two for residential. A second weighting is applied, based on the relative total assessed value of commercial to residential properties reported in the Statistical Analysis of the Roll. This results in an overall weighted factor for commercial properties and an overall weighted factor for residential properties. These two are added to produce an improvement factor by region. The average of all the regions except Las Vegas produces a weighted statewide factor. The Summary Table on page 1 shows the regional weighted average factors, as well as the weighted statewide factor of 1.10.

These factors are produced based on data from January 1, 2021 to January 1, 2022 and applied to improvements for a lien date in July, 2023. The period in time is required to compile data, process it, get it approved by the Tax Commission, and then disseminated to assessors for assessments prepared in advance of the July 1, 2023 lien date.

CONCLUSIONS AND RECOMMENDATIONS

Regional factors based on the study of Marshall-Swift Costing Service Cost Manual are accurate and provide equalized values. However, the acceptable range of resulting ratios has a greater spread between regions. Statewide factors, barring unusual local conditions, not only provide equalized values, but also tighter uniformity among regions. Given the results of the various sources of information, the Department recommends a statewide factor of 1.10.
