Development Center

The Business Assistance Network

The following pages contain Age, Sex, Race, and Hispanic Origin Estimates and Projections for the State of Nevada and its counties. Estimates for 2000 to 2010 are based on intercensal estimates and 2012 is based on that year's Governor's Certified Estimates. The projections are based on the 2013 to 2032 projections released on October 1.

There are two sets of tables for the counties of Carson City, Lincoln, Pershing, and White Pine as well as for Nevada. These counties have institutional group quarters' populations that impact their age, sex, race, and Hispanic origin distribution. Because of this, the first table includes the group quarters' population and household population and the second table without group quarters only includes the household population. In the case of Clark County the correctional population was not considered large enough to have a significant impact on these estimates and projections.

Please note, these estimates and projections may not add up to the total for the state and the county as there are minor rounding differences. These differences are minor and have no significant impact on the overall distribution of population.

As stated above, this set of estimates and projections have been improved by introducing the intercensal county totals as new control totals. Over the course of the coming year we hope to review the migration assumptions and newly released state life tables to see how changing these may impact the estimates and help further refine them.

The revisions involved primarily corrections to page headings and ensuring the full range of years was published for all counties.
