October 1, 2015

The following pages contain Age, Sex, Race, and Hispanic Origin Estimates and Projections for the State of Nevada and its counties. Estimates for 2000 to 2010 are based on intercensal estimates as controls for the total population. The 2011 to 2014 estimates use that year's Governor's Certified Estimates as controls. The projections are based on the 2015 to 2034 projections released on October 1 for the total population in conjunction with this document.

Please note, these estimates and projections may not add up to the total for the state and the county as there are minor rounding differences. These differences are minor and have no significant impact on the overall distribution of population.

There are two sets of tables for the counties of Carson City, Clark, Elko, Humboldt, Lincoln, Nye, Pershing, Washoe and White Pine as well as for Nevada. These counties have institutional group quarters' populations (correctional facilities) that impact their age, sex, race, and Hispanic origin distribution. Because of this, the first table includes the group quarters' population and household population and the second table which is without group quarters only includes the household population. The population and its age distribution for these facilities was estimated from decennial census information from 2000 to 2010 and then linearly interpolated for the decade. For Clark and Washoe Counties the 2010 Census population is used as a constant and for the other counties Nevada Department of Correction counts were used for 2011 to 2014 with the 2014 total being used as a constant through 2034.

The following data was used in these estimates and projections: the 2000 and 2010 Census data by age, sex, race, and Hispanic origin; the 2000 and 2010 Census data for group quarters' population; Nevada birth information for 2000 to 2013 from the Nevada Department of Health and Human Services; U.S. Decennial Life Tables for 1999–2001: State Life Tables National Vital Statistics Report, Volume 60, Number 9, September 14, 2012, National Center for Health Statistics; the State Demographer's intercensal estimates for 2000 to 2010; the Nevada Certified Estimates for 2011 to 2014; and the population projections for 2015 to 2034.

The Census reports the population by race and ethnicity and includes the categories of some other race as well as two or more races in combination. For these estimates and projections the data is provided for White; Black; American Indian, Eskimo, or Aleut; Asian or Pacific Islander (all not of Hispanic Origin) and Hispanic Origin of Any Race. The some other race and two or more groups were reallocated to the five groups by age and sex. The population was aged forward from 2000 to 2010 using the Nevada birth information and the Nevada specific NCHS life table for white and non-white male and female population. We used Nevada births for 2011, 2012, and 2013 and projected them using birthrates going forward. The residual derived from aging the population forward from 2000 to 2010 represented one estimate of migration. We also linearly interpolated the distribution of the population by year from 2000 to 2010 for the residential population (non-gg) and applied the residential intercensal population estimate to that year. That provided a residual for an estimate of annual migration.

Because Nevada uses the estimates and projections as a control total, migration is a residual that can be impacted by a number of factors. For instance if the Nevada Life Table leads to over or underestimating deaths within a specific county then migration could be over or under estimated. National research has reported that the Census consistently under reports the number of children under 10 and that varies by race and ethnicity but that did not appear to be the case for Nevada's birth information. In some counties the Census reported more children than would be expected given the birth information. Also, the estimates are a weighting of the Census to a July estimate. The Census is reported as of April 1. Also, the estimates and projections may over or underestimate the total population which impacts the accuracy of the age, sex, race, and Hispanic origin estimates and projections.

In calibrating the estimates to 2010 we first checked the estimate by five year age cohorts, then by total male and female distribution, and finally by total race distribution. For the projections we reviewed the sex ratios and they tend to reflect an aging population with females out living males. The Census Bureau assumes those survival rates will converge overtime. We kept the survival rates constant. It also may be that the check needs to be by sex, race, and ethnicity as opposed to looking at differences first by sex and then by race. Changing this may impact next years projections. Also, in calibrating these estimates and projections the effort focused on minimizing error overall. A subsequent report will be available that details the methodology, the error, and expected refinements.

**Nevada ASRHO Summary File With Group Quarters
Population Estimated For 2000 to 2014 and Projected
2015 to 2034 State Total**

Five-Year Age Cohorts	2000	2001	2002	2003	2004	2005	2006	2007
0 to 4 Years of Age	147,648	151,882	156,736	162,935	170,150	177,311	185,968	194,342
