

Production Run Sampling - Liquids/Drinks

Calculate 1% of the production run. Round up to the nearest unit. The minimum number of units is 2 units, regardless of what 1% is. Choose the number that is the lesser value of 1% or 25 units. This is your production run sample amount. Note that for drinks/liquids which have not already been bottled or jarred for consumer sale, "unit" means the liquid weight equivalent of one bottled or jarred unit.

Production run sample = 2 units

Production run sample = 3-25 units
