## Introduction to the 2024 Population Projections

The following is the 2024 edition of the 20-year population projections for Nevada based on the state and county population estimates for July 1, 2023, as certified by the Governor on March 1, 2024. The 20-year population projections are published each October by the Nevada State Demographer in accordance with NRS 360.289 pertaining to the annual reports of projected population of counties. The Regional Economic Models, Inc. (REMI) model v3.2.0 was used to project how the population might change given demographic and economic factors.

The REMI model provides information for all 17 Nevada counties by 23 major economic sectors. It looks at the interaction between the economic and demographic characteristics within a county, as well as the dynamic economic and demographic relationships between the 17 counties and the United States as a whole. The 20-year projections will change each year as data becomes available or is revised.

The REMI model provides a standard national and regional control forecast that can be considered an “out of the box” model (the model as shipped with no additional changes from the user). The v3.2.0 model relies on sector employment data for the 17 Nevada counties sourced from the Bureau of Economic Analysis (BEA) CAEMP25N data series published through 2022 (updated November 16, 2023). To further refine the model with actual sector employment change rates through 2023, sector employment data from the Nevada Department of Employment, Training & Rehabilitation (DETR) and the Bureau of Labor Statistics (BLS) Quarterly Census of Employment and Wages (QCEW) was compared between the 2<sup>nd</sup> Quarter of 2022 to the 2<sup>nd</sup> Quarter of 2023 for the nation and for each county. These change rates were then applied in the REMI model to provide a realistic adjustment to the 2023 sector employment forecasts. Employment forecasts for current and upcoming economic development projects across the state were also received from the Governor’s Office of Economic Development (GOED). These forecasts were used to further adjust the model inputs. Lastly, a series of change rates incorporating the above adjustments were applied to the baseline population from the 2023 Governor’s certified estimates to project state and county population totals through 2043.

These projections will be used as the control populations for the age, sex, race and Hispanic origin projections. A summary table is provided on the next page, followed by full projections by county at the end of this document.

Risks to these projections for consideration:

- Housing availability in some counties may be a limiting factor which is not represented in this model and could inhibit the long-term growth rates presented.
- The REMI model may not entirely predict employee commuting patterns, especially in rural areas, which could impact the population distribution among adjacent counties.
- Changes in international migration policy and fluctuating domestic migration patterns should be considered when evaluating long-term population outcomes.
- Lingering pandemic effects, global conflict, resource limitations, and recent economic volatility may have impacts to long-term population modeling that are yet to be understood.

**20-Year Population Projections Summary**
